

A variety of lifting equipment models, all compatible with PORTABULK® FIBCs, has been designed for fork-lift truck, crane and front loader applications.

The major difference between Goodtech Packaging Systems and other suppliers is our unique experience. Since the seventies, we have been engaged in developing and optimising materials handling systems for a wide range of industrial products. We have used our experience to expand into new areas and applications where we have also demonstrated our capability.

Our primary objective is always the same: the highest possible level of quality, satisfaction and cost efficiency for our customers.

NEVER walk under a suspended load and **NEVER** leave a suspended load unattended

Technical Overview

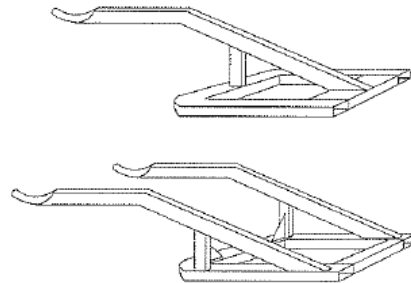

FRONT LOADER

- Lifting device mounted on front loader, enabling simultaneous handling of 3 or 4 PORTABULK® FIBCs
- Adapted for front loaders; no protruding sharp edges
- PORTABULK® FIBCs can be stacked up to 5 layers high, depending on lifting height capability
- Work Load Limit (WLL) up to 1500 kg on each hook

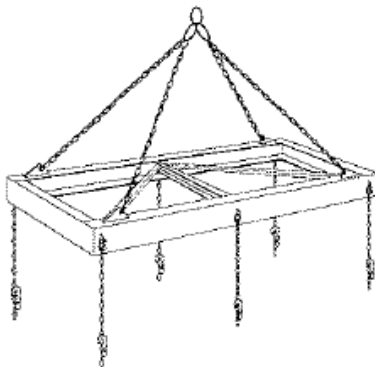

FORK LIFT TRUCK

- Spreader beam lifting device for crane loading and discharge
- WLL: up to 1500 kg on each hook
- For 3 to 20 PORTABULK® FIBCs on one beam, depending on requirement

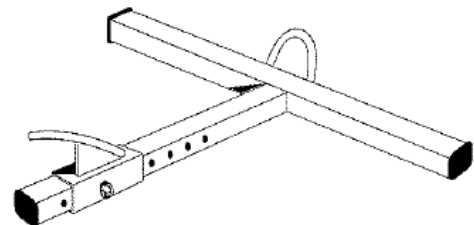

CRANE

- Spreader beam lifting device for crane loading and discharge
- WLL: up to 1500 kg on each hook
- For 3 to 20 PORTABULK® FIBCs on one beam, depending on requirement

LOW LIFT

- Provides increased flexibility by effectively reducing the lifting height by up to 40 cm
- No pallets needed during container loading
- WLL: up to 1500 kg
- Can be used with all standard lifting devices equipped with a hook
- Enables storage of PORTABULK FIBCs in confined spaces

NEVER walk under a suspended load and **NEVER** leave a suspended load unattended
